

DIMOS ANDRONOUDIS

AI ENGINEER | APPLIED AI & FORWARD DEPLOYED SYSTEMS

Athens, Greece | +30 6988065026 | dimos.andronoudis92@gmail.com

GitHub: github.com/DimosAndronoudis | LinkedIn: linkedin.com/in/dimos-andronoudis-161118282

PROFESSIONAL SUMMARY

AI Engineer with an M.Sc. in Natural Language Processing, building production Generative AI systems, RAG pipelines, AI agents, and backend services. Experienced translating business requirements into technical solutions and owning delivery from scoping and prototyping through testing, deployment, and iterative improvement.

TECHNICAL SKILLS

AI & LLM Engineering: Generative AI, RAG, AI agents, LangChain, LangGraph, MCP, prompt/context engineering, tool calling, structured outputs, embeddings, fine-tuning, model evaluation

Backend & Data: Python, SQL, FastAPI, REST APIs, WebSockets, Qdrant, Redis, API/database integration

Production AI: Docker, Kubernetes, Jenkins CI/CD, MLOps/LLMOps, testing, deployment, monitoring, caching, authentication, reliability, fallback strategies

Machine Learning: PyTorch, TensorFlow, scikit-learn, Hugging Face, NLP, deep learning

PROFESSIONAL EXPERIENCE

Junior Python Developer (AI) | Chemical Safety

Athens, Greece | 2025 - Present

- Own end-to-end delivery of Python and LLM solutions from business requirements and technical scoping through implementation, testing, deployment support, and continuous improvement, integrating SQL data, APIs, and enterprise systems.
- Design and develop agentic and multi-agent workflows using LangChain, LangGraph and MCP, integrating tools, APIs, enterprise data and multiple LLM providers through structured orchestration.
- Architected and built a production FastAPI AI backend exposing RAG and LLM capabilities through REST and WebSocket APIs, with Qdrant retrieval, Redis-backed memory, authentication, multi-source ingestion and evaluation workflows.
- Improve reliability, latency and response quality through caching, retrieval-confidence logic, reranking, validation, monitoring, fact-checking and fallback strategies.
- Develop document-intelligence, entity-resolution and browser-automation systems, including a production workflow combining deterministic services, search, scraping, agentic browsing, external integrations and parser-backed verification.

Earlier Experience

Diagnosis Specialist | Diagnostic Center | Athens, Greece | 2022 - 2024 - Structured assessments, documentation, reporting, and multidisciplinary collaboration.

Teacher | Schools | Athens, Greece | 2015 - 2022 - Teaching and adaptation of materials to varied needs, strengthening communication and requirements interpretation.

SELECTED PROJECTS

- GR-Legal-RAG** - Built a high-precision RAG pipeline for Greek legal documents, government gazettes, and ministerial circulars, focused on grounded retrieval and answer quality.
- NanoSupport** - Built a lightweight fine-tuning pipeline with Unsloth and TRL to adapt 0.5B instruction models into concise customer-support agents with minimal hardware overhead.
- AI-VoiceControl** - Built a low-latency voice-control system using Faster-Whisper, FastAPI, and LLM-based intent reasoning to automate Spotify playback and library actions.
- Meltemi** - Building a live application that presents current weather and related environmental conditions for beaches across Greece.

EDUCATION

M.Sc. Natural Language Processing | National and Kapodistrian University of Athens | 2022 - 2025

Thesis: One-class teacher-student knowledge-distillation pipeline for speech deepfake detection using XLS-R teacher representations and a lightweight student-SVM inference path.

M.A. Internet and Politics | National and Kapodistrian University of Athens | 2018 - 2020

B.A. Educational and Social Policy | University of Macedonia | 2010 - 2015

LANGUAGES

Greek: Native | English: C2 Proficiency, Cambridge
